D2: EP-A2-1 262 465 (WACKER POLYMER SYSTEMS GMBH & CO. KG) 4 December 2002 (2002-12-04).			
1. The present application satisfies the requirements of PCT Article 33(1) because the subject matter of claims 1-10 is novel within the meaning of PCT Article 33(2).			
1.1 Document D1 discloses (see claims 1, 12, 13; paragraphs 14, 15, 29, 30, 31) the use of dispersion powders that are redispersable in water and are based on a copolymer which is stabilised with a protective colloid, in the production of thermal insulation systems, said copolymer containing monomers that comprise carboxyl groups. Said document does not disclose copolymers containing keto or aldehyde groups.

Box No. V

Reasoned statement under Article 35(2) with regard to novelty, inventive step or industrial applicability:
Citations and explanations supporting such statement

- 1.2 Document D2 discloses (see claims 1, 9, 10; paragraphs 10-16) the use, in the production of thermal insulation systems, of dispersion powders that are redispersable in water and are based on a copolymer which is stabilised with a protective colloid said copolymer containing monomers that comprise carboxyl groups.

Said document does not clearly or explicitly disclose copolymers containing ketone or aldehyde groups.

2. The embodiments of the present application disclose that, by using dispersion powders containing monomers with aldehyde and ketone groups, the tearing values of a plastics panel (thermal insulating panel) after wet storage are increased (by comparison with the use of dispersion powders based on vinyl acetate/ethylene copolymers; see the application, page 20, table 1).

Neither D1 nor D2 considers the question of raising the tearing values of thermal insulation composite systems under damp conditions. The subject matter of the present application is therefore considered to be inventive (PCT Article 33(3)).
